⊗ AI in Education - System :-

⇒ Abstract :-

Driven by India's National Education Policy (NEP) 2020, Artificial Intelligence (AI), is being increasingly integrated to tackle challenges in educational personalization and efficiency. This review examines current AI application across Indian schools and universities, identifying key benefits like adaptive learning and automated administrative support. However, significant challenges persist, including the risk of algorithm bias, a widening digital divide, and data privacy concerns. Its success and equitable implementation requires and robust to benefits all students.
