- ① As from the table it is clear that for Italian the government spending on Roads and development is medium in (1990) and highest in (2000) and the lowest spending was in (2005)
- for Portugal the highest spending by the government was in (1990) and the lowest was in (2005).
 - for UK the highest spending was in the (2000) and the lowest was in the (2005).
 - for USA the highest spending was in the year (2005) and the lowest was in year (1995).
- ⇒ from the Above graph it is visible that for most of the countries the government spends less money on road and transport in year (2005) except U.S. Because U.S has the highest spending in the year (2005) and the lowest was in the year 200 (1995). The sudden increase in spending in year 1990 was not consistent in the upcoming years for each countries

② The graph represents the Gross Domestic Product from IT and Service Company of the UK. The highest % of GDP can be seen in 2000 for (IT) Industry and the lowest % of GDP growth was in the year 1992. For the Service industry the highest GDP growth was in the year 2000 and the lowest was in the year 1992. So it is clear from the graph in 2000 there was increase in GDP for both IT Industry and service industry in 2000 and the lowest was for the IT Industry and Service industry was in the year 1992. which states that service industry and IT industry both increases together as there was a rise in the market. The share of both industry are very close in the year 1996 both companies grows in year 2000 but IT industry grown very much with high % of GDP Group. whereas service industry grown moderately. It is also seen from the year 1992 to 2000 Both the industry has grown more and more and their contributive in GDP has also increased.
