

**SCHOOL OF ADVANCED SCIENCES
CONTINUOUS ASSESSMENT TEST - II
FALL SEMESTER 2025-2026**

SLOT: A1+TA1+TAA1

Programme Name & Branch : B. Tech
Course Code : BMAT205L
Course Name : Discrete Mathematics and Graph Theory
Faculty Name(s) : ANJANEYULU G S G N, PALLAVI MISHRA,
 ABHISHEK DAS, PRAVEEN, SELVAKUMAR R, PARTHIBAN A, SUJASREE M
Class Number(s) : 2452, 4418, 0889, 0869, 0864, 0893, 0872
Date of Examination : 05.10.2025 (Session 2)
Exam Duration : 90 minutes **Maximum Marks: 50**

General instruction(s):

- Answer All Questions
- M - Max mark; CO – Course Outcome; BL – Blooms Taxonomy Level (1 – Remember, 2 – Understand, 3 – Apply, 4 – Analyse, 5 – Evaluate, 6 – Create)
- Course Outcomes
 2. Use algebraic structures in applications.
 3. Counting techniques in engineering problems.
 4. Use lattice and Boolean algebra properties in Digital circuits.

Q. No	Question	M	CO	BL
1.	An encoding function $e: B^3 \rightarrow B^6$ is given by the generator matrix $G = \begin{pmatrix} 1 & 0 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 0 & 1 & 1 \\ 0 & 0 & 1 & 1 & 1 & 0 \end{pmatrix}.$ Determine all code words generated by the matrix. Find the associated parity check matrix H . Use H to decode the following received words 100111, 001101.	10	2	3
2.	A factory produces 1000 items, each stamped with a serial number from 1 to 1000. Every 3rd item undergoes a quality test for strength. Every 5th item undergoes a quality test for durability. Every 7th item undergoes a quality test for finish. How many items are tested for strength or durability but not finish? How many items will not go for any kind of test?	10	3	2
3.	a) A competition offers 20 distinct tasks. A team must select 8 distinct tasks to attempt. i. How many ways can the team choose 8 tasks if two particular tasks (say Task 1 and Task 2) cannot both be chosen? ii. How many ways can the team choose 8 tasks if at least 3 tasks must come from a favoured set of 10 tasks? iii. Suppose the team arranges the 8 chosen tasks in an ordered sequence. How many such ordered lists are possible if the first task must come from the favoured set of 10 and the last task must come from the remaining 10?	6	3	2

SCHOOL OF ADVANCED SCIENCES
CONTINUOUS ASSESSMENT TEST - II
FALL SEMESTER 2025-2026

SLOT: A1+TA1+TAA1

	b) How many 6-digit even numbers can be formed using the digits of 1223344?	4		
4.	Solve the recurrence relation $a_{n+1} - 10a_n + 25a_{n-1} = 5^n; n \geq 1, a_0 = 1, a_1 = 5.$	10	3	3
5.	a) Let $S = \left\{ \begin{pmatrix} a & a \\ a & a \end{pmatrix} / a \in \mathbb{Z} \right\}$. A relation R on S is defined as ARB if $\exists k \in \mathbb{N}$ such that $B = kA$ for $A, B \in S$. Verify whether S is a partially ordered set.	5	4	2
	b) Given the set $P = \{1, 2, 3, 4, 5, 6\}$ with the relations $2 \leq 1, 2 \leq 5, 6 \leq 2, 4 \leq 5, 6 \leq 4, 3 \leq 1, 6 \leq 3$ construct the Hasse diagram. Find the least upper bound and greatest lower bound of every pair of elements in P if it exists. Is $(P, \leq)$ a lattice?	5		

Fall Semester 2025-26

BMAT205L - Discrete Mathematics and Graph Theory

Slot: A1+TA1+TAA1

CAT II - Key

1. $e(m) = mG$

• $e(000) = 0000000$

$e(001) = 001110$

$e(010) = 010011$

$e(011) = 011101$

$e(100) = 100101$

$e(101) = 101011$

$e(110) = 110110$

$e(111) = 111000$

$$H = \begin{pmatrix} 1 & 0 & 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 & 1 & 0 \\ 1 & 1 & 0 & 0 & 0 & 1 \end{pmatrix}$$

i. $Hr^T = \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix} = 5^{\text{th}} \text{ column of } H$

∴ The decoded word is 100101

ii. $Hr^T = \begin{pmatrix} 0 \\ 1 \\ 1 \end{pmatrix} = 2^{\text{nd}} \text{ column of } H$

∴ The decoded word is 011101

2. Let A, B, C be the set of items tested for strength, durability and finish respectively. items whose numbers are

i. A, B, C are the sets of multiples of 3, 5 and 7 respectively.

No. of items tested for strength or durability but not finish is

$$|A \cup B \setminus C| = |A \cup B| - |(A \cup B) \cap C|$$

$$= |A| + |B| - |A \cap B| - |A \cap C| - |B \cap C| + |A \cap B \cap C|$$

$$= 333 + 200 - 66 - 47 - 28 + 9$$

$$= 401$$

No. of items that will go at least one test is

$$|A \cup B \cup C| = 543 \quad (|C| = 142)$$

No. of items that will not go any test = $1000 - 543 = 457$.

3a. i. $18C_8 + 2 \cdot 18C_7 = 43758 + 2 \cdot 31824 = 1,07,406$.

ii. $\sum_{k=3}^8 10C_k \cdot 10C_{8-k} = 1,15,275$.

iii. $10 \cdot 10 \cdot 18P_6 = 1,33,66,08,000$.

3.b. Total no. of digits = 7.

To form 6 digit even no., last digit must be 2 or 4.

Case i: Last digit is 2.

Remaining digits are 1, 2, 3, 3, 4, 4.

One digit must be omitted.

Omitted No. of permutations

$$1 \quad \frac{5!}{2!2!} = 30$$

$$2 \quad 30$$

$$3 \quad 60$$

$$4 \quad 60$$

Case ii: Last digit is 4.

Omitted No. of permutations

$$1 \quad 30$$

$$2 \quad 60$$

$$3 \quad 60$$

$$4 \quad 30$$

Total nos. ending with 4 = 180.

Total nos. ending with 2 = 180.

$\therefore$ No. of 6 digit even numbers = 360.

4. The char. eqn. is $r^2 - 10r + 25 = 0$.

$$\Rightarrow r = 5 \text{ (twice)}$$

$$\therefore a_n^h = (c_1 + c_2 n) 5^n$$

$$\text{Let } a_n^p = A \cdot n^2 \cdot 5^n$$

Substituting in the given recurrence relation, $A = \frac{1}{10}$.

$$\therefore a_n = \left(c_1 + c_2 n + \frac{n^2}{10} \right) 5^n$$

$$a_0 = 1 \Rightarrow c_1 = 1.$$

$$a_1 = 5 \Rightarrow c_2 = -\frac{1}{10}.$$

$$\therefore a_n = \left(n^2 - n + 10 \right) \frac{5^n}{10}.$$

5a. Since $A = 1 \cdot A \quad \forall A \in S$, R is reflexive. $\therefore R$ is antisymmetric.

Let ARB and BRA for $A, B \in S$.

$$ARB \Rightarrow \exists k_1 \in \mathbb{N} \text{ s.t. } B = k_1 A.$$

$$BRA \Rightarrow \exists k_2 \in \mathbb{N} \text{ s.t. } A = k_2 B.$$

$$\therefore A = k_2 k_1 A, \text{ where } k_1, k_2 \in \mathbb{N}.$$

$$(1 - k_1 k_2) A = 0$$

$$\Rightarrow 1 - k_1 k_2 = 0 \text{ or } A = 0$$

$$1 - k_1 k_2 = 0 \Rightarrow k_1 k_2 = 1 \Rightarrow k_1 k_2 = 1.$$

$$\Rightarrow A = B.$$

$$A = 0 \Rightarrow B = k_1 A = 0. \Rightarrow A = B.$$

Let ARB and BRC for $A, B, C \in S$.

$$\Rightarrow \exists k_1 \in \mathbb{N} \text{ s.t. } B = k_1 A.$$

$$\exists k_2 \in \mathbb{N} \text{ s.t. } C = k_2 B.$$

$$\therefore C = k_2 k_1 A$$

$$= k A, \text{ where}$$

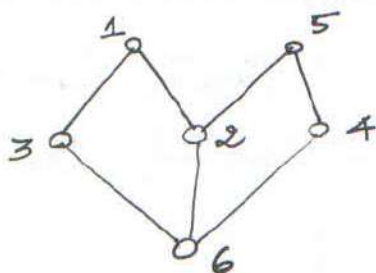

$$k = k_1 k_2 \in \mathbb{N}.$$

$$\therefore ARC.$$

Hence R is transitive.

sb.

Hasse diagram

GLB

$\times$	1	2	3	4	5	6
1	1	2	3	6	2	6
2	2	2	6	6	2	6
3	3	6	3	6	6	6
4	6	6	6	4	4	6
5	2	2	6	4	5	6
6	6	6	6	4	6	6

LUB

$\oplus$	1	2	3	4	5	6
1	1	1	1	—	—	1
2	1	2	1	5	5	2
3	1	1	3	—	—	3
4	—	5	—	4	5	4
5	—	5	—	5	5	5
6	1	2	3	4	5	6

Since LUB does not exist for some pair of elements in P , $(P, \leq)$ is not a lattice.
