

Project Report First Phase Submission Instructions

This document outlines the required components and guidelines for submitting the first phase of your project report. Pay close attention to incorporating feedback from your abstract and clearly documenting all modifications made to your project. Each component and its detailed description contribute to your overall marks, so ensure all aforementioned sections are completed properly. Your report will be thoroughly checked for plagiarism, so ensure all content is original and prepared by you.

Report Components

The first phase of your project report must include the following sections:

1. Introduction

This section should provide an overview of your project. Clearly state the problem you are addressing, the objectives of your project, and the significance of your work. Any modifications made based on feedback from your abstract should be explicitly mentioned here.

2. Literature Review

Present a comprehensive review of existing literature relevant to your project. Discuss previous research, identify gaps in current knowledge, and explain how your project contributes to the field. If you have adjusted your literature review based on previous feedback, highlight these changes.

3. Design Figure

Include a clear and concise design figure that visually represents your project's architecture or system design. This figure should be easy to understand and properly labeled. Provide a detailed explanation of the figure immediately following it.

4. Module Description

Describe each module or component of your project in detail. For each module, explain its purpose, functionalities, and how it interacts with other modules. This section should clearly demonstrate your understanding of your project's internal workings.

5. Dataset and Method Description

- **Dataset Description:** If your project utilizes a dataset, describe it thoroughly. Include information about the dataset's source, size, features, and any preprocessing steps applied.
- **Method Description:** Detail the methodologies and algorithms you have employed in your project. Explain why you chose these methods and how they contribute to achieving your project's objectives.

Submission Guidelines

- **Original Content:** All content submitted must be original. Plagiarism will result in severe penalties.
- **Clarity and Detail:** Ensure all sections are clearly written, well-organised, and provide sufficient detail as required.
- **Modifications:** Explicitly state all modifications made to your project based on the feedback received for your abstract. You can use a dedicated subsection within the Introduction or as a separate point if the modifications are extensive.
- **Completeness:** Verify that all required components are present and thoroughly completed.
- **Formatting:** Adhere to standard academic report formatting guidelines.

Attached, you will find a reference paper that can assist you in organising your report more effectively. The sample paper demonstrates how a stage-wise division of work can improve the identification of modules, and it also illustrates a suitable way to represent your design figure.
